The Soluitional Problems of Socialistic

Azimov A
Teacher, Department of Primary Education Methodology, Andijan State University

Abstract: This article discusses the issue of language and society, the impact of changes in society and social networking texts on language from the current problems of sociolinguistics, a new branch of modern linguistics.

Keywords: sociolinguistics, anthropocentric theory, social factors, social networking texts, language pollution.

The first quarter of the 21st century was a time when linguistics made great strides. During this period, a number of areas of linguistics, such as psycholinguistics, linguculturology, computer linguistics, ethnolinguistics, reached their peak of development. The development of anthropocentric theory in modern linguistics and the priority of the human factor have led to the emergence of new directions in the study of language. The science of sociolinguistics, one of the new directions of modern linguistics, has also rapidly reached a new stage of development. Nowadays, sociolinguistics is an integral part of modern linguistics. Sociolinguistics a branch of linguistics is the field of study of a language in relation to its social conditions. All languages in the world develop taking into account the set of external conditions that exist in social conditions. Language emerges, develops, and exists as a social phenomenon. Its main purpose is to serve the needs of the society in which a person lives, to ensure communication between members of a particular society and society. Defining the concept of society in sociolinguistics is one of the most difficult issues. A society is not a collection of many people, but a system of different relationships between people belonging to one or another social, professional, gender and age, ethnic, ethnographic, religious group, where each person is unique. takes place and is therefore a carrier of a particular social status, social functions and roles. An individual as a member of society can be identified on the basis of a number of relationships that connect him or her to other individuals.

In the current process of globalization, society is developing rapidly. Dozens of new inventions are emerging in our daily lives every day. In the 21st century, the human community is emerging with everything it needs for its needs. As a result of the development of society, people's thinking and thinking abilities are also changing. The issue of social networks and their impact on language, which have become an integral part of people's daily lives in the process of globalization, is also one of the current issues that need to be studied by sociolinguistics. Nowadays, when there is an urgent need to send a message to someone, we immediately use social networks. There are also specific features of conversations in social networks or in the virtual world, and below we will consider the specific features of social network texts and its impact on language. Today, the most popular social networks are "telegram", "whatsapp", "instagram" messengers. Each differs in that it has its own ease of information exchange. Telegram Messenger is one of the most popular social networks today for sending and exchanging matte information. In this case, the information is in text form, which creates great convenience for the recipient. In this messenger we can follow the conversations that take place in all areas of daily life. On the one hand, the exchange of information, a popular messenger that helps people a lot in sending text messages, has its huge advantages. However, the other side of the issue should not be overlooked, as it has a significant impact on the deterioration of spelling literacy of young people who start a virtual conversation on this social network. The results of research on social media texts have led to the emergence of the term “internet jargon”. Internet jargon is a jargon used to communicate over computer...
networks. At present, it is impossible to formulate a clear definition of this concept, as the concept of the network and its trends are constantly changing. This implies that network users do not follow the norms of literary language and eliminate many errors. For example, network users try to save time by shortening keywords or commonly used words. (AGMT, we have come to meet you with tomorrow time). In this sentence, the introductory word "agreement" and the auxiliary "with" are abbreviated. This is a violation of spelling rules. Given that such correspondence of network users has become a daily habit, the next generation will follow their example, it is necessary to take into account that the spelling rules of the language pose a serious threat.

Internet jargon is causing a decline in pronunciation literacy. People use a variety of memes, jargon, and more to express their thoughts and feelings by simplifying words, phrases, and sentences. These actions can then lead to a misunderstanding of the difference between good and bad writing among the younger generation.

The following rules should be followed to avoid the impact of social networking texts on language.

a) Analysis of errors that occur when people communicate on social networks and various sites;

b) the use of a special dictionary to explain the words that came into being with the advent of the Internet;

c) Talk about another way of expressing opinions;

d) Finding a way to fight illiteracy on the Internet.
