ABSTRACT

Both Āyurveda and Philosophy are two subject streams, which are more close to the worldly and spiritual lives of human beings. Their connection is non-separable even in the beginning of these two systems. Therefore, it is worthy to investigate the connection between these two systems according to the cognition of seven categories and atoms, which are defined in the philosophy of Vaiśeṣika and how they are applied for the treatments of Āyurveda. The enumeration of categories included in Vaiśeṣika system such as; Dravya, Guṇa, Karma, Sāmānya, Viśeṣa, and Samavāya have been applied for the descriptions in the Āyurvedic treatments. Both these systems accept that the substance is the main component and that others all depend under the substance. Vaiśeṣika mentions of five types of Karma developed by Ūrdhva etc. Caraka and Suśruta have discussed about Pañca karma, Agni karma, Jāta karma etc. According to the philosophy of Vaiśeṣika, Sāmānya (General) means similarity of all objects and each other. For instance, the existence in combinative position of Substance, Attribute, and Action are depended upon their appearance of Sāmānya as well as Viśeṣa. In Āyurvedic system, one of the fundamental elements is awareness of resemblance. The resemblance of the substance, attribute, and action is always becomes the cause of increasing healthiness. On the other hand, their dissimilarity is the cause of reducing healthiness itself. Both systems accept that the Ātma is eternal. From these facts, it would appear that the Āyurvedic system have applied the concepts in philosophy of Vaiśeṣika for the use of a practical methodological system.

Keywords: saptapadārtha, substance, atoms, ātma, vaiśeṣika

1. INTRODUCTION

Āyurveda is a science of treatment of diseases, which cause physical, and mental illnesses. The connection between philosophy and Āyurveda is non-separable and it has been prevalent since the beginning of these two sciences in the past. For instance, some philosophical concepts contained in the six philosophies in India were absorbed for some explanations of the medical treatments in Āyurveda. The present study will focus on the seven categories and atomism, which are the teachings of vaiśeṣika established by Kanāda. The objective of the research is to investigate the worthiness of the seven categories and atoms for the treatments of Āyurveda. Though Suśruta did not accept the attribute of Paratva, he applied Guru, and Laghu for his explanation of the treatments of medicine.

Methodology

The present research is mainly based on primary data. The texts, which mentions about philosophy and Āyurvedic texts in Sanskrit will be subjected to thorough research to arrive at conclusions along with the secondary sources. In order to understand the worthiness of the seven categories (sapta padārtha) and atoms of philosophy for Āyurvedic treatments, the comparative and analytical method would be used.

Literature Review

Following are some of the important works related to the subject matter of the present study. The *Vaiśeṣikasūtra* of Kaṇāda, edited by Major B.D.Basu is a worthy treatise in relation to the subject for the versatility of seven categories. In fact, *Vaiśeṣikasūtra*, the prime treatise for *Vaiśeṣikasūtra* philosophy, mentioned only six categories. The seventh one (*Abhāvapadārtha*) was included by the philosophers belonging to post *Vaiśeṣika* such as Śrīdhara, Udayana, Śivāditya etc. *Padhārthadharmaśaṃgraha* written by Praśastapāda is another treatise relating to the present study. There are four commentaries written on the work of Praśastapāda, which are named as *Vyomavatī* of Vyomaśekhara, *Nyāya Kandalī* Śrīdhara, *Kiraṇāvalī* of Udayana, and *Līlāvatī* of Śrī Vatsa. In considering the *Āyurvedic* literature relating to the study, *Caraka* and *Suśrta Saṃhitās* are the main treatises. The study also utilizes *Carakasamhitā* by Agniveśa, edited by Vaidya Jadavaji Trikamji Ācārya and the *Suśrta Saṃhitā* of Suśrta, edited by Vaidya Jadavaji Trikamji Ācārya.

Discussion

The system of Āyurveda

Āyurveda is a science of medicine in the world with its historical roots in the Indian subcontinent. It is a system of preventing physical and mental diseases. The name *Āyurveda* is derived from the sound 'Āyush' and the verb root of 'Vid' indicating the meaning knowledge of life. For instance, this is designated as *Āyurveda* where advantages and disadvantages as well as happy and unhappy life along with what is good and bad for life, its measurement and life itself are described. *Suśrta* defines on the term of *Āyurveda* as; the life existing here or a one who acquires life. It acquires four objects of the human existence (*Puruṣārtha*) named virtue (*Dharma*), wealth (*Artha*), desires (*Kāma*), and salvation (*Mokṣa*).

According to *Caraka*, *Āyurveda* is introduced by *Brahma*. In addition, both *Caraka* and *Suśrta Saṃhitās* mention that it is a branch of *Atharvaveda*. However, it is apparent that *Āyurveda* has a long historical background in India because some scholars attempt to categorize it into three parts as the periods of pre-Vedic, Vedic, and post-Vedic. Pre-Vedic medicine was used since Indus Valley Civilization to the Vedic period. Vedic medicine include in the period of Vedic literature. The knowledge of the medicine of Vedas is derived from two Vedas, the *Rgveda* and the *Atharva-veda*. The post-Vedic Medicine can be divided into two sub-periods; the first existed from the completion of the collection of the Vedic hymns (800 B.C.) to the rise of medical schools (600 B.C.), the second existed from the rise of the medical schools to the end of classical Indian medicine.

The schools of *Ātreya* and *Dhanvantarī* can be considered to have been established in the sixth century B.C. In fact, *Caraka* and *Suśrta saṃhitās*, which are precious treatises of *Ātreya* and *Dhanvantarī*, include in the period of 600 B.C. - 200 A.D. Another valued work related to the present study is *Aśṭāṅgahṛdayasaṃhitā* written by *Vāgbhaṭa*. These *Caraka*, *Suśrta*, and *Aśṭāṅgahṛdaya saṃhitās* are called *Vṛddhatrayī* (the great three treatises) in *Āyurvedic* literature. In spite of these three main works, *Mādhavanidāna*, *Śāraṅgadharaśaṃhitā*, and *Bhāvaprakāśa* are called *Laghutrayī* (small three treatises). Besides these books, there are several other works in the *Āyurvedic* literature.

The period of post-Vedic medicine can be considered as an especial one because the *Brāhmaṇa*, *Upaniṣad*, Jain and Buddhist philosophical and religious influences can be clearly seen in this period. From the six systems of Indian philosophy, the *Sāṅkhya*, *Yoga*, *Mīmāṃsa*, and *Vaiśeṣika* were prior to Buddhism. Therefore, it can be considered that the philosophical concepts of *Vaiśeṣika* have probably influenced the *Āyurvedic* literature.

The system of Vaiśeṣika philosophy

The foundations of the *Vaiśeṣika* philosophical system can be ascribed to the second century B.C. According to traditional belief, the originator of *Vaiśeṣika* philosophy is Kaṇāda. He lived in 150 - 200 CE. His most famous treatise related to this philosophy is *Vaiśeṣikasūtra*. According to the rule of *Pāṇinī* (IV.iii.87), this word is derived from 'Viśeṣa' meaning 'a treatise on Viśeṣa'. It is clear that the scholars of India also believed this name has derived because the name 'Viśeṣa' is included in one of the seven categories. The seven categories are 1.*Dravya* (substance), 2.*Guṇa* (quality), 3.*Karma* (action), 4.*Sāmānya* (generality), 5.*Viśeṣa* (particularity), 6.*Samavāya* (relation of inherence), and *Abhāva* (non-existence).

The categorization of seven Padārthas and their sub-categories can be illustrated from the following chart.

The relationship between Vaiśeṣika system and Āyurvedic system

Āyurveda enumerates on the components such as world, the genesis of the human, the constituents of the human and universe following the philosophical thoughts of Nyāya-Vaiśeṣika, Sāṅkhya-Yoga, and Mīmāṃsa and Upaniṣad. Though the main purpose of philosophy is to recognize how to gain eternal salvation, the purpose of Āyurveda is to prevent diseases, preserving the good health, and getting four objects of desire ((Puruṣārtha). The main objective of the present study is to investigate the connection between Āyurveda and philosophical thoughts introduced in the philosophy of Vaiśeṣika. The enumeration of categories included in the Vaiśeṣika system such as; Dravya, Guṇa, Karma, Sāmānya, Viśeṣa, and Samavāya have been applied in the descriptions of Āyurvedic treatments. The components of similarity relating to the categories of these systems are shown in the following table.

Categories	Vaiśeṣika system	Āyurvedic system
Dravya	Prthivi, Āpas, Tejas, Vāyu, Ākāśa, Kāla, Diśā, Ātma, Manas. ¹	Ākāśa, Vāyu, Agni, Jala, Kṣiti (Pañcabhūta), Ātma, Manas, Kāla, Diśā. ²
Guṇa	Rūpa, Rasa, Gandha, Spharśa, Saṅkhyā, Parimāṇa, Pṛthaktva, Saṅyoga, Vibhāga, Paratva, Aparatva, Gurutva, Dravatva, Sneha, Śābda, Buddhi, Sukha, Dukkha, Iccā, Dveṣa,	Śabda, Sparśa, Rūpa, Rasa, Gandha, Guru, Laghu, Śīta, Uṣṇa, Snigdha, Rūkṣa, Manda, Tīkṣṇa, Sthira, Sara, Mṛdu, Kaṭhina, Viśada, Picchila, Khara, Ślakṣṇa, Sthūla, Sūkṣma, Sāndra,

	Prayatna, Dharma, Adharma, Sanskāra. ³	Drava, Smṛti, Cetanā, Dhṛti, Ahāṅkāra, Buddhi, Iccā, Dveṣa, Sukha, Dukkha, Prayatna, Paratva, Aparatva, Yukti, Saṅkhyā, Saṁyoga, Vibhāga, Prthaktva, Parimāṇa, Sanskāra, Abhyāsa. ⁴
Karma	Utkṣepaṇa, Avakṣepaṇa, Ākuñcana, Prasāraṇa, Gamana. ⁵	If something is feasible with endeavor or effort is caused to something, it is called Karma (action). ⁶
Sāmānya	Substance is general (Sāmānya) cause of dravya, Guṇa, Karma. ⁷	General of all objects is caused for the preventing healthiness. ⁸
Samavāya	The resemblance of Substance and Attribute is the characteristic of being the originators of their congeners. ⁹	If there is some non-separate existence of substances such as earth etc. with their qualities, it is called Samavāya (inherence). ¹⁰

As mentioned above, the analytical explanation on the connection between Vaiśeṣika and Āyurvedic systems can be elaborated from here onwards as follows. According to Vaiśeṣikasūtra, from seven categories, the substance is the main component and others depend under the substance. The Āyurvedic system also accept that idea because Caraka points out that the substances are the main components for treatments of medicine.

It is obvious that the nine Substances which were mentioned by Kaṇāda and Caraka are similar; however, the sequence of mentioning the terms is quite different. According to the Vaiśeṣika system, the attributes are twenty four (24). In Āyurvedic system, though Caraka included those 24 attributes for his elaboration of the treatments, Suśruta did not accept the attribute of Paratva. He applied Guru, and Laghu for his explanation of the treatments of medicine. However, Vaiśeṣika mentions five Karma as Ūrdhva etc., Caraka and Suśruta, which includes Pañca karma, Agni karma, Jāta karma etc. Considering these facts, it would appear that the Āyurvedic system have applied the philosophical concepts of Vaiśeṣika for its practical methodological system.

According to Vaiśeṣika philosophy, Sāmānya (General) means similarity of all objects with each other. For instance, the existence in combinative position of Substance, Attribute, and Action are depended upon their appearance of Sāmānya as well as Viśeṣa. In Āyurvedic system, one of the fundamental elements is awareness of resemblance. The resemblance of the substance, attribute, and action is always the cause of increasing healthiness. On the other hand, their dissimilarity is the cause of reducing healthiness itself. For instance, the acidity of Āmalaka (Indian gooseberry) causes to reduce the acidity of bile in the body because of its quality of frigid Āmalaka. It is an instance for pointing out the way to get resemblance of Substances. If the resemblance of Substances is not preserved, it is the cause for the increase of diseases because of the dissimilarity of Substances. Therefore, it is apparent that the concept of Sāmānya and Viśeṣa in the philosophy of Vaiśeṣika have been applied for the enumerations of the treatments in Āyurveda.

The preserving of Substances depend on three forms-body, sense, and objects. In Āyurvedic system, there is a concept named similarity with universe and individual (loka puruṣa sāmāya). It is a kind of a similarity with nature and human beings. It is accepted in Āyurveda that there is a combination between nature and man in the perspective of acting substances, attributes, and action. Mind (Sattva), Soul (Ātma), Body (Śarīra) are three sticks. The world or life is being with the help of these three elements. Therefore, the beings get affected by different matters in the out word world. This life can be named as Puruṣa and it is a cause of Āyurveda. Āyurveda has been uttered for the sake of this cause.

⁹ ŌVygu[yae> sjatŷyarMĒkTv< saxMyRm!, - Vaiśeṣika Sūtra1.1.1.9

From this fact, it is clear that some fundamental elements such as soul, mind, body etc. have been applied from the philosophy of Vaiśeṣika for the treatments in Āyurveda.

The concept of atomism was firstly introduced by Kanāda in his Vaiśeṣikasūtra. According to him, the primary atoms are eternal. Activated or created atoms are impermanent. In Āyurvedic system, all worldly aspects can be divided into two parts as Cetana and Acetana. Created one is non-eternal. When the body is concerned, Vāta (Air), Pitta (Pile), Kapha (Phlegm), Sapta Dhātu (Seven components), and Trimala (Three kinds of uncleanness) are impermanent. Ātmā is eternal. His enumeration of the atoms can be seen as the types of once, second, third, and forth. The power of activeness of the atoms has basically connected with two atoms and their manipulator is god Īśvara. Nevertheless, Caraka mentions that the power of activeness of the atoms belongs to itself. In this manner, two systems accept that the Ātma is eternal.

2. CONCLUSION

Taking the above mentioned facts into consideration, the most obvious finding which emerge from the present study, can be mentioned as follows. It is obvious that, Āyurvedic system was developed with the help of Indian philosophical systems. Out of those, one of the most precious philosophies is Vaiśeṣika. Therefore, it is perspicuous that the philosophical concepts of Vaiśeṣika such as seven categories, atoms etc. have influenced the enumeration of treatments in the Āyurvedic medical system.
