**Annotation:** *In the period of rapid development, the comprehensive development of the country depends on the intellectual potential of its population. In today's globalized world, the perspective of an intellectually underdeveloped state is unilateral. The attitude of our people to the processes of globalization can be explained by the well-known Indian scientist Mahatma Gandhi: "I cannot always close my home gates and windows, because my house needs fresh air. At the same time, I do not want the air coming through our doors and windows to turn into a storm, to destroy my house, and to destroy myself".*

**Keywords:** *Intelligence, Capacity, Development, Research, Discovery, Innovation, Promotion, Financing, Youth.*

### INTRODUCTION:

The 21st century is in the age of globalization, it is safe to say that there is no field where intellectual potential and its results have not penetrated. On this topic, the head of our state said: "Some call it the age of high technologies, some explain it as the age of thinking, others as the age of general information. Of course, in all of these ideas, in a sense, there is a truth, a rational core. Because it is natural that each of them reflects some sign of today's multifaceted and colorful life. But in the minds of many, this is an era of globalization. "

In the Republic of Uzbekistan, great attention is paid to young people, their education, intellectual potential and development into harmoniously. In the 21st century, when intellectual wealth reigns, it is important to develop the intellectual potential of young people, to support them spiritually and materially to bring up young people as harmoniously developed people.

One of the most important conditions for the sustainable and rapid progress of the country is the education of well-rounded, purposeful and energetic young people with modern knowledge and skills, who can take responsibility for the decent future of the country. Every member of our nation, which has a great spiritual history, dreams of a bright future for our children. It is important to note that an effective investment is an investment in the education of children.

According to statistics, young people under the age of 30 in Uzbekistan make up more than 60% of the country's population. The issue of intellectual, spiritual and physical development of modern youth in Uzbekistan has risen to the level of state policy.

In our country of independence, certain work has been done to educate young people in the spirit of patriotism, respect for national traditions and values, to bring up a spiritually mature and physically healthy generation, to protect their rights and interests. At the same time, the analysis of the situation in the field and the ongoing activities address issues of concern to a wide range of young people, in particular, the creation of appropriate conditions for young people to find their place in life,

their full support, career guidance and special attention is paid to employment and encouragement of initiatives. Adoption of the Resolution of the President of the Republic of Uzbekistan Shavkat Mirziyoyev on August 30, 2019 "On measures to improve the system of involvement of youth in science and support of their initiatives" and the establishment of the Youth Academy under the Ministry of Innovation Development. is a shining example of opportunity. The Youth Academy, which aims to systematically support talented young people and train a new generation of scientists, within the framework of its activities, -

1. Talented young people with a desire to conduct research support, enable them to conduct applied and innovative research, carry out systematic work on training a new generation of young scientists;
2. Creating favorable conditions for young scientists to solve specific problems, to develop advanced technological developments that are in high demand in domestic and foreign markets;
3. Orientation of enterprising youth to entrepreneurial activity through the organization of scientific and innovative accelerators and business incubators;

Orientation of youth startup projects to the production of products and services with a high degree of commercialization that meet modern requirements for the sustainable development of economic management bodies and enterprises with state participation;

4. Facilitate the training of talented young people in prestigious research centers, universities, technology parks and industrial enterprises of developed countries;
5. Establishing close ties with internationally and locally recognized organizations, universities, research centers, holding master classes, trainings, as well as conferences, seminars and competitions with the participation of their scientists and experts in current scientific and innovative areas." - the prospects of this sector are guaranteed.

Based on the opportunities created:

- Introduce the widespread use of 5D visual aids in the teaching of natural and exact sciences in educational institutions;
- Establishment of "Intellectual Youth" club in each educational institution;
- I would like to propose further increase the number of projects, competitions, events and coverage in this area throughout the country.

As a result of these offers, young people with intellectual potential will be discovered in the country. It will also give them a new opportunity to demonstrate and enhance their talents.

Patriotism is a concept that expresses people's love and devotion to their homeland. Patriotism is one of the universal human feelings and spiritual values that have been polished for centuries. Historically, patriotism is also a set of emotions that people have developed in the process of social development related to the fate of their homeland, the struggle of peoples for the inviolability and independence of the territory in which they live. This is reflected in the pride of the country's past and present, in the protection of its interests. It is not in vain that they say that loving one's country is a matter of faith. In many countries, family breakdown is taking place for no apparent reason. This has not bypassed our country. As a result, homeless children are orphaned. This has a serious impact on the future of children. It is not uncommon for an orphan to have a heart defect and for people of different purposes to try to fill the gap. Let us fill such a gap in the spirit of patriotism. Let us be kind to one another. Let the children see the love in the family and express their love for their homeland.

What we are left of is a good name, a good practice. Even Alexander the Great took his hand out of his coffin after his death. Is not Alexander's life a model for us? He did great things for his country. I consider this one action of his to be an example for the future. Reforms are underway in many areas. I want to draw the attention of our compatriots to environmental culture and let's not ax the future by ignoring it. I would like to draw attention to the path of patriotism in remote areas as well. I think we can stir up the patriotic feelings of the younger generation if we take a stand on this issue. Only then could we win in this area. Any suffering suffered on the way to victory is sacred. I believe that if a sports complex and a comfortable library are built in the most visible places of the neighborhood, young people will be able to make a significant contribution to the development of the country. Because if we do not start the development of the country with the education of young people, it can lead to bad consequences in the future. It is no coincidence that our ancestor Abdullah Avloni said a century ago that "education is for us a matter of life or death, salvation or destruction, happiness or disaster". We will achieve our goal if we spend our money on the future of our youth, not on the past.
